# **CIRCLE RELEASES 2006 NATIONAL CIVIC AND POLITICAL HEALTH SURVEY**

C

IRCLE's new 2006 National Civic and Political Health Survey provides the most upto-date and detailed look at how young Americans are participating in politics and communities. The survey takes a broad look at political and civic activity and finds that many young Americans are involved. For example, 36 percent have volunteered within the last year; 30 percent have boycotted a product because of the conditions

under which it was made or the values of the company that made it; and 67 percent have confronted someone who said something that they considered offensive, such as a racist or other prejudiced comment.

However, certain groups of young people are largely *disengaged*, including 17 percent who have not done any of the 19 measured forms of participation within the last 12 month.

The survey also finds that most young Americans are strikingly uniformed or misinformed about important aspects of politics and current events. However, those who participate (vote, join groups, and volunteer) tend to be better informed.

The survey also finds that most young Americans are strikingly uninformed or misinformed about important aspects of politics and current events. However, those who participate (vote, join groups, and volunteer) tend to be better informed. Additionally, the survey finds a loss in trust in the government among young people as compared to 2002.

The survey was released on October 3, 2006 at the National Press Club in Washington D.C. It was conducted from April 27 to June 11, 2006 by Princeton Survey Research Associates International (on behalf of CIRCLE) with funding from The Pew Charitable Trusts. The survey focuses on young people but contains a representative sample of older Americans for comparison. It is one of the few surveys of its kind containing over-samples of Asian-American youth. In addition, it also includes over-samples of African-American and Latino youth and was translated into Spanish. The questionnaire largely replicates one designed by Scott Keeter, Cliff Zukin, Molly Andolina, and Krista Jenkins and fielded in 2002.<sup>1</sup>

## CIVIC ENGAGEMENT: THE GOOD NEWS AND THE BAD

The survey looked at 19 measures of civic engagement. According to CIRCLE director Dr. Peter Levine, "People have numerous ways to influence the world around them, and it is important to look beyond the most frequently measured forms of engagement—voting and volunteering. Our survey found many young people are engaging in a variety of activities

including protesting, persuading others to vote, addressing community problems, boycotting, and raising money for charities. Nevertheless, there remain a sizeable number of young people who are disengaged from civic activities. Our challenge is to find out more about why so many young people disengage from civic life and about the programs that can help turn this trend around."

Some young people are intensely involved. Thirteen percent of American youth are what we call "dual activists," engaging in at least two different forms of community engagement and two different forms of political participation. Almost seven percent of young Americans are hyper-involved, claiming ten or more different kinds of participation. Compared to their peers, this hyper-engaged group is more likely to be Asian-American, Democratic (or leaning toward the Democrats), liberal, suburban, college-educated, and from college-educated homes. Most are confident in their ability to make a difference.

The bad news is that substantial numbers of young people are disconnected from politics and community life. A majority of young people (58 percent) are disengaged, meaning they are unable to cite two forms of civic or two forms of political engagement that they have done. A subset of the disengaged—the 17 percent of youth who have not done any of the 19 forms of civic engagement—are much less confident in their own ability to make a difference, less likely to have college-educated parents or parents who volunteer, less likely to have any college experience, less aligned with either party, and more likely to be white.

## POLITICAL KNOWLEDGE MATTERS FOR ENGAGEMENT

The survey found that most young Americans are uninformed or misinformed about important aspects of politics and current events. For example, 53 percent are unaware that only citizens can vote in federal elections; only 22 percent can correctly name at least one member of the President's Cabinet; and only 34 percent know that the United States has a permanent seat on the United Nations Security Council.

However, those who participate tend to be better informed. Of those who could answer all six of our knowledge questions correctly, 48 percent were regular voters, 32 percent were active members of at least one group, and 50 percent had volunteered. In contrast, of those who could answer no questions correctly, just 15 percent voted regularly, 11 percent belonged to any group, and 25 percent volunteered.

## TRUST IN GOVERNMENT DOWN

One of the most striking findings was the loss of trust in government among young people. When Continued on page 12

# **19 INDICATORS OF CIVIC ENGAGEMENT**

### **CIVIC INDICATORS**

- 1. Community problem solving: Working together informally with someone or some group to solve a community problem
- 2. Regular volunteering for a non-electoral organization: Working in some way to help others for no pay
- 3. Active membership in a group or association: Belonging to and actively participating in groups or associations, either locally or nationally
- 4. Participation in fundraising run/walk/ride: Personally walking, running, or bicycling for a charitable cause
  5. Other fundraising for charity:
- Helping raise money for a charitable cause

#### **ELECTORAL INDICATORS**

- Signing an e-mail petition
- 16. Written petitions:

Signing a written petition about a political or social issue **17.** *Boycotting:* 

Not buying something because of conditions under which the product is made, or because of disapproval of the company that produces it

18. Buycotting:

Buying a certain product or service because of approval of the social or political values of the company that produces or provides it

19. Canvassing:

Having done some work as a canvasser going door-to-door for a political or social group or candidate.

#### Continued from page 3

this survey was last conducted in 2002, young Americans appeared to be highly favorable toward government. About two thirds of people between the ages of 15 and 25 felt that government should do more to solve problems, that governmental regulation of business was necessary not harmful, and that government deserved more credit than it usually got. Young people were substantially more favorable toward the government than their elders were.

In 2006, about the same proportion of young people—63 percent —still believe that the government should do more to solve problems. Just 31 percent believe that "Government does too many things better left to businesses and individuals." However, young people are significantly less likely in 2006 to favor government regulation of business. More of them say that government is "almost always wasteful and inefficient" than say that it "often does a better job than people give it credit for" (47 percent versus 45 percent).

According to Dr. Levine, "While we don't know the exact reason for the declining trust in government, the main news headlines in 2002 involved an attack on the United States and the invasion of Afghanistan. Four years later, the news was dominated by Katrina and the federal response and by the war in Iraq. Right now, most young people seem to want the government to address problems but doubt that it is effective."

The complete findings can be found on CIRCLE's Web site at www.civicyouth.org
